Conco Services Corporation Releases an Updated 2016 Catalog for the Power Generation Market

Verona, PA (March 18, 2016) Conco released an updated comprehensive market-focused catalog highlighting its products and services. The 32-page catalog provides a single source for all the products and services Conco has to offer in the power generation market.

The updated catalog highlights the core competencies of Conco's cleaning, leak detection and eddy current testing and includes customer testimonials, case information and product details.

"Our catalog provides customers with a complete overview of our products and services," says National Sales Manager Gary Fischer. "It contains detailed information on our various cleaners, each designed for a specific purpose, full descriptions of our non-destructive testing and leak detection options allowing customers to determine which service best suites their particular need, and it highlights the benefits derived from the use of these products and services."

The inside cover features a unique gatefold containing an infographic that visually represents Conco's products and services and identifies how Conco provides solutions for customers to achieve Total Performance™ in their condensers. Total Performance is a complete three-part solution that first identifies the status of the condenser tubes, second detects equipment fatigue that can cause inefficiency and third cleans tubes to improve flow and heat transfer.

Requests for catalogs can be made via telephone at 1-800-345-3476 or by emailing info@conco.net.

Founded in 1923, Conco is the world's leading provider of condenser and heat exchanger services to the power generation and industrial process industries with offices located in the US, Europe and Asia Pacific.
